

THANAPHAT BOONRUCK

Full Stack Developer — Backend-focused (.NET · Spring Boot · Microservices)

thanaphatboonrak@gmail.com | 096-720-7771 | github.com/Thanaphat-Boonrak

SUMMARY

Full stack developer building service-oriented backends in .NET and Spring Boot, paired with React and Angular front ends. Particularly interested in backend structure — service boundaries, inter-service communication, and container orchestration with Kubernetes. Builds the same application twice across ecosystems (Java/.NET) to stay fluent in both.

EDUCATION

Bachelor of Science, Information Technology

King Mongkut's University of Technology Thonburi (KMUTT) — School of Information Technology

GPA 3.31

SKILLS

Backend: C# / ASP.NET, Java / Spring Boot

Frontend: React, Angular, TypeScript, Tailwind CSS

Infrastructure & Interests: Docker, Kubernetes, microservices architecture

Tools: Git / GitHub, Database — SQL Server, MySQL, PostgreSQL

PROJECTS

E-Library

Personal project

Full-stack digital library platform — Spring Boot REST API backend, React front end

- Developed search and browsing features for an online bookstore category, enabling users to easily discover available books.

Java, Spring Boot, React

Ecommerce

Personal project

E-commerce web application — product catalog and checkout

- Developed an E-commerce solution featuring secure Stripe payment integration and Redis caching to optimize shopping cart performance and minimize primary database traffic.

C#, .NET

Web Activity

Personal project

Activity/event management web app

- Implemented full CRUD functionality for activity management, utilizing Clean Architecture and CQRS design patterns.

TypeScript, .NET

Tinder Inspire

Personal project

Matching-style application

- Developed a real-time messaging system using SignalR, featuring active online status indicators and user profile viewing.

C#, .NET

Recipe Sharing

Personal project

Recipe-sharing web app

- Implemented full CRUD functionality for recipes, featuring user authentication for recipe creation and management.

Java, Spring Boot

Auction Microservice

Personal project

Microservices-based online auction platform

- Designed an event-driven microservices architecture using RabbitMQ, with a database-per-service pattern for data isolation, and gRPC for synchronous inter-service communication to verify data existence across services.
- Deployed services on Kubernetes, with a DigitalOcean load balancer for traffic distribution and a custom domain purchased through Namecheap.

C#, .NET, Microservices

ACTIVITIES & CAMPUS INVOLVEMENT

D-Day

2026

KMUTT School of Information Technology

- Full stack developer for the faculty's D-Day event.
- Worked with professors to define system requirements, including booth display, QR scan tracking, and login restrictions via Eventpop tickets and university OAuth (.kmutt.ac.th emails).

SIT Starter

2025

KMUTT School of Information Technology

- Backend developer.
- Built backend services using Node.js, Express, and WebSockets for PDF slide streaming and real-time user matching with online status tracking.
